

## **Invoice check**

Want to avoid paying too much?

The web application couples the energy bills needed for energy management directly with the invoice checking module. With one mouse click, subscribers can check whether the energy bills entered are correct. If you want, we can report periodically on the results of the invoice check. That checking invoices is anything but superfluous has been proven again and again. Frequent variances are excessive contracted capacity and overpaid energy tax. We recover overpaid amounts on a no cure-no pay basis. So participating organizations are sure that they never pay too much for their energy.

### **Specificaties**

- Direct view of invoice correctness
- Periodic reporting available
- Reclaim money with no risk
